preview button)

Core

- Upgraded TegoNuke™ Mailer to current version with current SwiftMailer, improved error handling, more transport options, debugging & ability to configure message priority & bounced email address.
- Upgraded Shortlinks to current version.
- Upgraded all Javascript / jQuery libraries and plugins to current versions.
- Modified database interaction to use mysqli and prepared statements for better performance.
- Enhanced filtering and escaping of block data for consistent performance and compliance.
- Added a standard approach for module admin authentication.

Modules

- Replaced News module with Tricked Out News, which includes single / dual column news, nukeSEO Social Bookmarks with CSS Sprites, article page ads, Disqus comment integration, tag clouds and more.
- Replaced Downloads module with TegoNuke™ Downloads (formerly NukeScripts Group Downloads).
- Upgraded HTML Newsletter to current version.
- Added sub forums to Forums module.

Blocks

- Enhanced the [User Info Block](#).
- Various [Block Functionality and Styling](#) Improvements.
 - [HTML Lists and Default Styling](#): Many blocks converted to use unordered and ordered lists.
 - [Unique ID's](#): Generate unique CSS ID's that can be associated with specific blocks, also used to add a link for admins to edit each block from within the block.

- [Additional Block Position](#): Added an additional block position of Center Top (above msg)
- [Positional Awareness](#): Added "*Positional Awareness*" so that blocks can adjust their layouts or JavaScript functionality depending on position.

Themes

- Added a theme manager with theme previews to site administration.
- Added link the theme manager in nukeNAV™.
- Added the RickTido theme.
- Improved [Default CSS Styling](#).

Languages

- Added Norwegian language files.
- Added a standard function to create language drop-down menus.

Users

- Added links to the Your Account profile from and nofollow tags to link in the Members List module.
- Enabled admins to identify users who are approved but not yet activated (see description and screenshots below).
- Enabled all default user attributes (except user name and email address) to be required / optional during or after registration.
- Added a warning on the user registration page if Javascript is not enabled.
